E-Commerce

This project is all about SaaS E-commerce. Its core functionalities include user login, admin dashboard, all API tracking then for client interface separate functionality. The technology stack utilized comprises Next.js, Clerk authentication all implemented with TypeScript.

Chat-app

I am currently working on this ongoing project, which involves developing a real-time chat application that allows users to communicate seamlessly. The application leverages modern web technologies for both the frontend and backend to ensure a responsive and dynamic user experience. Node.js, MongoDB, Socket.io, React.js these technologies I am using to build the project.
